Customer demographics

Mean age 41.23 · Median age 39
Age range 18–95

Previous campaign outcomes

Current subscription rate by previous outcome

Prior outcome	Customers	Subscribed
Success	1,071	**91.3%**
Other	537	**57.2%**
Failure	1,228	**50.3%**
Unknown	8,326	**40.7%**

“Unknown” is a recorded category, not confirmed failure.

Effectiveness & contact duration

47.38%

Subscribed: **5,289** / 11,162
Not subscribed: **5,873**

Contact duration

Mean: 371.99 · Median: 255
Median subscribed: **426**
Median not subscribed: **163**
Duration units not specified. Duration is known after contact —not a pre-call targeting input.

Key insights & recommended actions

- **Re-engagement opportunity:** prior-success customers show 91.3% subscriptions. Test a targeted follow-up pilot.
- **May leads activity:** 6,575 campaign contacts (23.5% of total). Review staffing against this concentration.
- **Job mix:** management and blue-collar roles together account for 40.4% of records. Test relevant messaging.
- **Contact intensity:** one-contact records convert at 53.4%, versus 29.2% for 6+. Test a capped follow-up policy; harder cases may receive more calls.
- **Balance is not a shortcut:** campaign contacts vs balance has Pearson r = -0.014. Avoid balance-only targeting.

Method & interpretation: All values calculated from the uploaded data; no simulated records. “Customers” counts rows (no unique customer ID is supplied). Campaign contacts sum the **campaign** field; previous contacts summarize **previous** record’s month and are not an event-level monthly call log. Months are calendar-ordered, with no year inferred. Balance uses source units. No blank cells or duplicate rows were found; explicit “unknown” categories are retained. Subscription ra benchmark. Associations do not establish causation. Chart tooltips provide exact values; scatter zoom supports closer inspection.
